### CARATTERISTICHE GENERALI

Questo nuovo monoblocco a soffitto per celle frigorifere unisce i vantaggi dei sistemi water loop ai vantaggi offerti da un Blocksystem Rivacold, ampliando la gamma in bassa temperatura pur mantenendo ingombri compatti:

- › Aumento della resa e riduzione dei consumi su base annua grazie alla condensazione libera
- › Scambiatori a piastre per ridurre al minimo le perdite di carico e la carica di refrigerante. La carica gas rispetta il limite dei 150g per ogni circuito. Ogni unità può essere installata in ambienti occupati che non siano sale macchine speciali senza alcuna restrizione
- › Basso consumo di energia anche grazie ai ventilatori elettronici
- › Facilità di manutenzione e flessibilità nelle modifiche al circuito idraulico grazie al funzionamento a portata d'acqua costante
- › Temperatura dell'acqua in ingresso compresa tra 5°C ed i 48°C
- › Scambiatori a piastre
- › Espansione a valvola termostatica
- › Sbrinamento a gas caldo
- › Scarico diretto della condensa di sbrinamento

### GENERAL FEATURES

The new R290 ceiling mount packaged systems combines the advantages of a water loop circuit with the advantages offered by a Rivacold Blocksystem by widening the range in low temperature but keeping a small encumbrance: Refrigeration capacity increase and energy consumption reduction on a yearly basis due to free condensation Plate heat exchangers to minimize the gas load losses and refrigerant charge. The refrigerant charge respects the limit of 150 g for each circuit. Each unit can be located in an occupied space which is not a special machinery room without restrictions Low energy consumption thanks to the electronic fan-motors Ease of maintenance and flexibility in modifications to the hydraulic circuit thanks to the operation at a constant water flow Water temperature inlet between 5°C and 48°C Plate heat exchangers Thermostatic valve expansion Electronic fan motors Direct draining of defrost condensation

fan 1 x Ø 200.

(1) Absorptions are calculated at the following  
conditions LBP Tevap=-30°C; Tcond=50°C

(2) Pressure drop data refer to pure water. For glycol  
the following correction factors are to be considered

(3) COP calculated @ Tc=-20°C and TH2O=15°
