

## Vexve X - Choose the right handle for your needs!

You can choose the basic handle or T-handle for X-series shut-off valves according to your operating needs. The new handles allow a better insulation distance to ensure energy efficiency. The handles are made of composite, which is a lightweight, durable and more environmentally friendly material choice than metal. You can remove the handles without tools.

### Properties:

- Material composite / PA+GF\*
- Handle torque duration 60 Nm
- Maximum short-term operating temperature 220 °C

*\*The composite material used in the handles has been subjected to aging tests, which have also included temperature fluctuations and exposure to UV radiation. According to the test results, the X-series handle is even better suited for outdoor use than the galvanized steel handle.*

### Available:

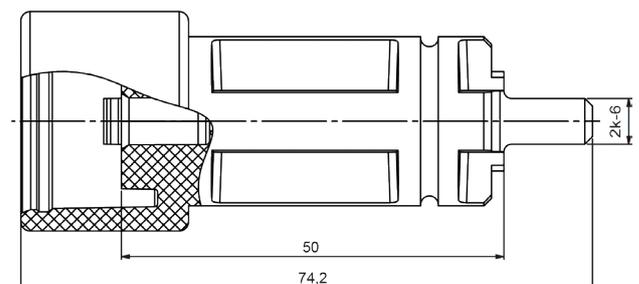

- Suitable for X series DN 10–50 shut-off valves
- The same handle is suitable for all DN sizes

### Stem extension

The insulation dimension can be increased by 50 mm with the help of a stem extension. The stem extension is also stackable (e.g. two stem extensions, 100 mm insulation dimension increase).

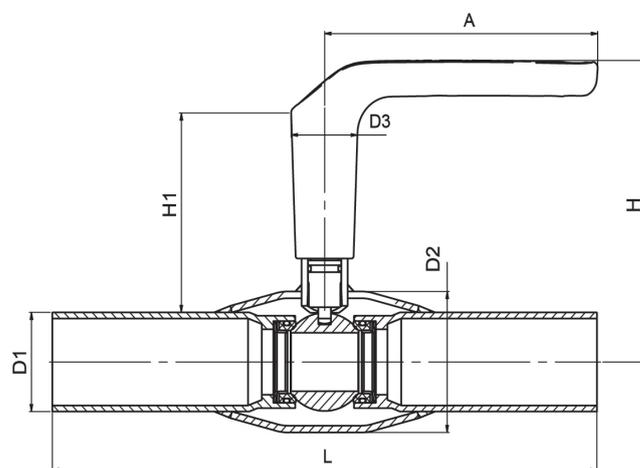

Product	Product number
Vexve X stem extension	901162

## Handle

The basic handle is delivered standard with X-series shut-off valves. When ordered separately delivered standard with a blue Vexve lid. Other colour variations are also available.

Product	Product number
Vexve X handle	901115X
