

WARNING TAPE WITH DETECTION ELEMENTS

Marking the underground networks with warning tapes is important, especially for the reason of great danger to human life in case of cable damage. Raw materials used for such tapes are top quality (LDPE). Applying the steel wires in tape provides easy and reliable detection of the route. Standard available rolls are 500 meter long (others at request). Tape could be wrapped around ABS (Acrylonitrile-Butadiene-Styrene) protection plate.

PARAMETERS

Colour	Width	Thickness	Detection	Print*	Protection plate (optional)
Yellow	150 mm	130 mikrons	Stainless steel wire fi 0,4 mm without insulation x 2	Caution Communications/Power Cables Below/Tele Optic etc.	ABS (black)/ 3 mm thick

*at customer's request

Protection plate (ABS)
