Installation contactors

Benefits and features

Introduction

ABB offers a complete range of equipment for controlling, remote switching and protecting electrical installations in buildings as hotels, hospitals, shopping centers, office centers and domestic applications.

ESB and EN installation contactors are designed to match the Modular DIN rail components (MDRC) for common use in dedicated panels providing high safety and finger protection.

The range

The ESB range includes 4 ratings from 20 A to 63 A with 2 to 4-pole version. The EN contactor range offers 3 types from 20 A to 40 A with an additional manual switch in front.

Flexible use for many application

ESB20 ... ESB63 can be used for DIN rail as well as for industrial applications:

- Resistive loads such as electric heaters, water heaters, etc
- Motors, pumps
- Lamp switching and controls (building installation)

High comfort due to hum-free operation

The installation contactor types ESB24 ... ESB63 / EN24 ... EN40 operate free from vibration, thanks to their DC coil technology. This feature has high value in building installations where hum-free and silent operations are important for people's farewell.

High protection against overvoltages and current peaks

- Built-in surge protection for ESB24 ... ESB63
- ABB tested lamp table provides secure planning

Approvals available

Certificates for CE, CCC, UL/CSA, GOST, as well as household or ship approvals available. Other approvals on request.

Compact and optimized design

Installation contactors with MDRC design have a very compact size. A powerful ESB63, max. operating current 63 A fits in a small enclosure with only 60 mm depth.

Cost savings

- Low power consumption of DC coils (ESB24, ESB40, ESB63)
- Better logistics, because AC/DC coil supply requires less variants
- Significantly reduced space compared to industrial contactors

High availability and safety of EN types

EN types have the same features and benefits as ESB contactors, but also have a special hand operating function. This provides customers with the following features:

- Manual control in case of failure is always available
- Easier and faster commissioning
- Time savings on maintenance and testing of equipment

Installation contactors

Overview

Remote controlled	ESB20	ESB24	ESB40	ESB63
Remote and manually controlled	EN20	EN24	EN40	-

ESB20 installation contactors

20 A AC-1 / AC-7a

AC operated

ESB20

1SBC103007F0014

Description

The ESB20 installation contactors are used for the control of single phase loads up to 20 A. They operate with an AC coil. Various N.O. and N.C. contacts combinations are available.

ESB24 installation contactors

24 A AC-1 / AC-7a

AC / DC operated

ESB24

2CDC221005F0010

Description

The ESB24 installation contactors are used for the control of single and three-phases loads up to 24 A. Due to their DC solenoid actuator, the ESB24 can be connected to AC or DC voltages. This provides the following benefits:

Hum-free operation, low power consumption, integrated high overvoltage protection. Various N.O. and N.C. contacts combinations available.

Main accessories: Auxiliary contact blocks EH04.

EN20 installation contactors - manually / automatic operated

20 A AC-1 / AC-7a

AC operated

1SBC103001F0014

EN20

Description

The EN20 installation contactors are used for the control of single phase loads up to 20 A. They operate with an AC coil and have a built-in toggle switch to select between three function modes. This offers many advantages as:

You can make functionnal test before installation start-up. It can be used for maintenance operation, to change lamps and test it. It provides higher safety and drop out as you can switch the application manually.

The toggle switch is also used for household application like water heating where double rate of kWh is used.

Function modes:

- OFF position,
- automatic run (normal contactor function),
- manual override with a return to AUTO the next time the coil is energized.

Installation contactors

Lamp load table

Lamp load

Please notice: Switching lamps is a capacitor load application where high inrush current peaks could occur. These are influenced by the length and cross section of the wire as well as the type of power supply unit and specifications of the lamp brand. For example long cables can increase the possible number of lamps per pole. The table shows the allowed max. current for 1 pole and considers already the startup current peaks.

The following selection table shows the current values and the maximum switchable capacitor load for compensated lamps. These two limits have to be considered in the selection of contactors.

Contactor type	ESB20/EN20	ESB24/EN24	ESB40/EN40	ESB63
Permitted compensating capacity per phase C _{max}	75 µF	100 µF	350 µF	500 µF
Lamp types	Maximum load of the current paths during switching of electric lamps I _a (A)			
Incandescent and halogen lamps (230 V)	6	7	20	30
Mixing lamps without ballast	6	7	20	30
Fluorescent lamps with conventional ballast	single lamp uncompensated	9	22	36
	single lamp parallel compensated	3	3.5	10
	series compensation, duo circuit	9	22	36
Fluorescent lamps with electronic ballast or CFL	3	7	20	30
LED lamps	3 ¹⁾	7	20	30
High pressure mercury-vapor lamps	single lamp without compensation	9	11	18
	single lamp with parallel compensation	3	3.5	10
Halogen metal-vapor lamps	single lamp without compensation	9	11	18
	single lamp with parallel compensation	3	3.5	10
High pressure sodium-vapor lamps	single lamp without compensation	9	11	18
	single lamp with parallel compensation	3	3.5	10
Low pressure sodium-vapor lamps	single lamp without compensation	9	11	18
	single lamp with parallel compensation	3	3.5	10
Electronic ballast devices	3	7	20	30

¹⁾ Valid for max. inrush of 50 x I_a

Example for lamp load calculation

Due to many varieties of lamps and ballasts we advice to take the current load as base for reference.

The lamp table considers already the inrush peaks and other lamp parameters.

Please see the following examples for a reliable project lamp calculation

- Fluorescent lamp with conventional ballast, uncompensated
 - the lamp operating current I = 1.5 A, voltage U = 230 V
 - 1 pole of ESB24 can be loaded with max. 22 A, see lamp table => 22 A / 1.5 A = 14.66 => 14 lamps
 - 1 pole of ESB20 can be loaded with max. 9 A, see lamp table => 9 A / 1.5 A = 6 lamps

Please use the referring value in the table stated above and divide it with the current stated on the lamp. This will lead into the number of lamps which can be switched.

E.g.: ESB24 used for LED lamps: 7 A (= 7000 mA) / 85 mA = 82.23 => 82 lamps
