

Special incandescent lamps

Anti-insect: Buglezzz

Buglezzz: effectively reduces irritation from flying bugs!

It's great to sit outdoors on fine summer evenings. But flying insects are attracted by light, and can cause a lot of irritation. If only you could keep them away. Now you can, with a Philips Buglezzz bulb! How? Use Buglezzz for the illumination you need, together with a standard incandescent bulb at least 4 meters (13 feet) away. Insects are more strongly attracted by the standard incandescent bulb or residential lighting. So while you're sitting near your Buglezzz bulb, up to 50 % less insects will irritate you.

Cadmium free

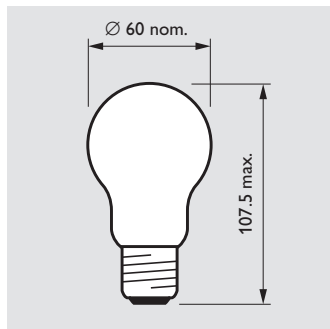

The Philips Buglezzz lamp and other Philips coloured lamps are cadmium free.

Applications

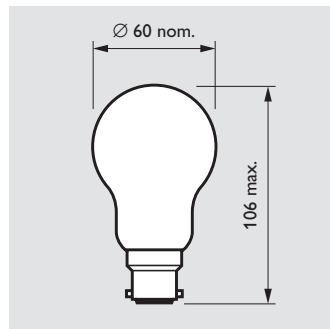

Limiting insect nuisance up to 50 % at e.g.:

- Garden parties and BBQ's
- Outdoor fetes
- Camping sites
- Road stands
- Service stations
- Terraces and balconies
- Waterfront sites.

Scientifically proven

The effectiveness of Philips Buglezzz against insects has been proved by scientific research.* The findings showed that Buglezzz bulbs are significantly less attractive to insects than standard light bulbs. Over a 3-month outdoor test period, up to 50 % less insects were attracted by Buglezzz. For optimum performance, the Buglezzz and standard bulbs must be placed at least 4 meters (13 feet) apart.

* Tests carried out by Plant Research International, Wageningen UR, the Netherlands, during the summer of 1999.
