Normal incandescent lamps with a golden or silver mirror in front of the filament and a clear glass bulb. Basically, there are two families: one with a conventional bulb-shape and one with a typical and distinctive blown bulb - flatter on top which is called the Spotline Crown Silver (NR60). Spotline Crown Silver lamps offer one of the best incandescent accent lighting solutions. In the correct luminaires, they give a very narrow (10 degr.), well defined, high intensity beam with high visual comfort and optimum colour rendering (Ra=100). Each family comprises types in two different bulb finishes: they have either a golden front mirror or a silver front mirror.

Bowl reflector lamps are widely used in accent lighting luminaires with an incorporated or attached mirror that concentrates the light exactly on the spot where it is needed and in decorative or general lighting luminaires, where the avoidance of discomfort glare from a bright filament is most important.

Silver-mirrored bowl reflector lamps are used in reflecting luminaires to create attractive lighting effects in both modern and classical interiors.

Golden mirrored bowl reflector lamps have been specially developed to harmonise with the colour finishes of brown, beige or copper luminaires and to produce a pleasant soft lighting effect for a cosy atmosphere.

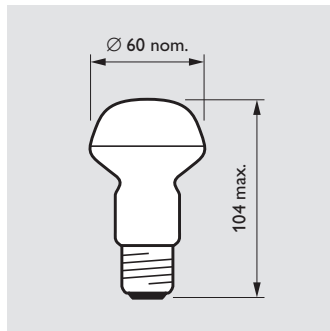

### Applications

- Shops and showrooms, hotels, restaurants, bars, public buildings, show-windows, homes, exhibitions, clubs and museums.
