CREATE A PERFECT MATCH

Extract air diffuser with integrated plenum box

ATLAS-8 (PEFC) is an extract air diffuser with an integrated plenum box for freely suspended ceiling installation. It is designed to visually match the ATLAS-5 (ROFC), ATLAS-6 (RPFC) and ARIES-6 (DYFC) supply air diffusers for a consistent and aesthetic look.

It is recommended for use in commercial application buildings such as offices, conference rooms, shops, etc. The diffuser has a perforated front plate that ensures the effective air extraction from the room and low sound levels. The diffuser plate is fixed to the diffuser body with magnets and safety wires, making it easy and safe to open for maintenance.
