Foreword

More than 50 years after the launch of Powder Actuated Tools, **Spit Gas & Powder Nailing Systems** continue to increase their market share across Europe's construction jobsites.

With strong brand recognition **Spit Gas & Powder Nailing Solutions** offer significant technical and financial advantages to construction companies of any size:

→ TECHNICAL ADVANTAGES

Spit Nailing Systems offer a user friendly, fast and reliable cordless solution for a variety of fixing requirements. The recent '**One Step Solution**' innovation has provided Spit customers with a unique way to fasten a variety of accessories and consumables into steel and concrete that is up to 8 times faster than traditional plug and screw methods.

→ FINANCIAL ADVANTAGES

By being close to its customers Spit has been able to benefit from a sound understanding of their customers' needs and requirements. This understanding has enabled Spit to develop a complete range of products designed specifically to help contractors increase on site productivity and, in turn save significant time and money on any job.

GAS Tool

With its own internal combustion engine, Pulsa fastens cable management, wiring accessories and dry wall track up to eight times faster than any other system.

PRINCIPLE

FEATURES

- Fuel injection carried out by an electro valve and an electronic chip (fully automatic tool)
- Nails are delivered in 10 nails strips. Each fuel cell allows up to 850 nails at 20°C
- Oval battery : high autonomy. Capacity up to 1200 nails. Rechargeable battery (time 1 hour)
- Energy from 80 to 100 Joules
- Telescopic guide 5 kg actuation force : little effort required when fixing overhead, particularly for ceiling applications (the majority of powder actuated nailing tools required approximately 15 kg actuation force)
- Full range PULSA accessories for electrician application
- Small edge distance
- Working with extreme temperature : - 5°C ; + 40°C
- 20 or 40 pins magazine
- Low recoil vibration
- CE marking
- Low maintenance
- Well adapted to low strength material (masonries)

FUNCTIONING PRINCIPLE FOR GAS TOOL

PULSA is powered by easily replaceable fuel cells. Each time the nose of the tool is depressed a metered amount of air and fuel gas mixture is injected into the combustion chamber where it is ignited by a spark when the trigger is pressed. As in a car engine the piston is forced down, driving the fastener to a pre-set depth.

GAS Tool

CONTACT PRESSURE SAFETY

2 conditions to obtain percussion, in order:

- 1 - Press the tool against the working surface
- 2 - Press the trigger

NAIL PENETRATION

The tool automatically absorbs excess of power to suit the supporting material. However, certain applications may require the nail to penetrate deeper into the base material or penetrate less.

Penetration is adjusted by slackening the two screws on the upper part of the barrel using the allen key provided and moving them backwards or forwards in the recess on plate. Intermediate adjustments between maximum and minimum are possible.

To ensure successful nailing of wiring and cable management accessories, it is recommended that the tool is set to the minimum drive position. Failure to do so could result in cracking or breaking of accessories and PVC-U trunking. The PULSA 700E is supplied adjusted to the minimum position, and the PULSA 700P is supplied adjusted to the maximum position.

Fuel cells

Fuel cell contains butane and propene. The safety data sheet is available on request.

BEST BEFORE DATE

The usage limit date is affixed to the fuel cell, after this date, the performance could be affected.

STORAGE CONDITIONS

- Storage temperature : +5 à +25°C.
- Protect from direct sunlight
- Use and keep in well ventilated area.
- Keep out of reach of children.

Powder Actuated tool (PAT)

PRINCIPLE

Train the operator

Use the tool designed for your application

Select the correct cartridge to adapt the power to the type of fixing

Select the correct pin to suit fixture and base material

FEATURES

- Safety use
- Instant fixing
- High fixing rate
- Self contained
- Energy from 200 to 560 Joules
- Mechanical power adjustment on P370, P60 and P200 tools
- M.A.C. SYSTEM for P230 / P525L (no deformation of the metal sheet)
- Large consumable range (maximum pin length 90 mm)
- Operate temperature : - 15°C / + 50°C
- All weather condition
- Easy and low maintenance

FUNCTIONING PRINCIPLE FOR SPIT POWDER ACTUATED TOOLS

2 conditions to obtain percussion, in order:

- 1 - Press the tool against the working surface
- 2 - Press the trigger

The SPIT Powder Actuated Tools used the indirect firing system, this means that a piston is positioned between the fastener and the propellant charge, to reduce the speed of the pin.

The SPIT powder-actuated fastening tools employ the well-proven piston principle. Pulling the trigger causes ignition of the propellant and the energy it releases is then transferred to the piston.

The energy from the propellant charge transferred into combustion chamber on the piston. The accelerated mass of which drives the pin into the base material at a much lower velocity.

Powder Actuated tool (PAT)

SAFETY SYSTEM

→ CIP Agreement

All SPIT tools are approved according to CIP (Comité International Permanent) requirements for shot firing tools. CIP agreement is delivered by St Etienne testing Stand (French Institute). The CIP marking is affixed on all SPIT tools and also on the cartridge boxes.

→ Contact pressure safety

In conformity with AFNOR standards E71-100 and E71-101, all SPIT PAT tools are indirect firing tool, of class A symbol A*. So, the cartridge can only be fired if the tool is fully depressed and contact pressure is maintained hard up against the support material. The SPIT tools are approved by the St Etienne Testing Stand (French institute) or National institute.

→ Sequential trigger safety system

The cartridge cannot be fired even if the trigger is pulled prior the positioning the tool and taking up the full contact pressure. (CIP requirements).

→ Safety trigger

The trigger is locked in place when the tool is not in use. It cannot be fired unless the tool is in the full down-hand position. The trigger safety function will not permit the tool to be fired if the support material is not rigid enough. (except P370 tool).

→ Design safety

The cartridge disc is totally enclosed within the tool.

→ Load magazine chamber inspection

When the tool is loaded it is easy to verify the presence of the cartridge disc.

→ M.A.C. System for roofing tool, total on-site safety - PATENTED

The P230, P525L tools are fitted with the M.A.C. System. The M.A.C system prevents the pin from passing through the steel sheet if is not shot into the support frame.

Powder Actuated tool (PAT)

PRINCIPLE OF POWDER ADJUSTMENT

Procedure: 1 - Choose the pin length (see p.13)
 2 - Choose the lowest cartridge power
 3 - Adjust mechanically the tool power.

Always start by using the lowest possible cartridge and the lowest possible setting.

CARTRIDGE POWER

The wide range of cartridge types allows successful fixing to a variety of base materials.

To maintain reliability and reduce operator fatigue, use the lowest level of power to achieve an acceptable fix.

Pins are fired into the support by an explosive cartridge. To cover this range of applications, the SPIT range of cartridges is specifically calibrated to meet specific needs (2 calibers and 6 levels).

- Caliber 6.3/10
- Caliber 6.3/16

The cartridge power is identified by an international colour code within each calibre:

Brown, Green, Yellow, Blue, Red, Black.

Cartridge power	<div> <div>Low</div> <div>→ Medium ←</div> <div>High</div> </div>						
Caliber type	Brown	Green	Yellow	Blue	Red	Black/ Purple	Mechanical adjustement
International Code	2	3	4	5	6	7	
SPIT P45	6.3/10	6.3/10	6.3/10		6.3/10		No
SPIT P60	6.3/10	6.3/10	6.3/10				Yes
SPITFIRE P370	6.3/10	6.3/10	6.3/10		6.3/10		Yes
SPIT P230		6.3/16	6.3/16	6.3/16	6.3/16	6.3/16	No
SPIT P250			6.3/16	6.3/16	6.3/16	6.3/16	No
SPITFIRE P525L		6.3/16	6.3/16	6.3/16	6.3/16	6.3/16	No
SPITFIRE P560		6.3/16	6.3/16	6.3/16	6.3/16	6.3/16	No

MECHANICAL POWER ADJUSTMENT

Some of the Spit tools are equipped with mechanical power adjustment to allow flexibility to the end user with a same type of cartridge changing the tool power.

There are two different mechanical systems :

- combustion chamber volume adjustment by barrel rotation : P60
- combustion chamber fume exhausts adjustment by a knurling wheel : P370

Field of use

INTO A STEEL MEMBER

As the pin penetrates into the steel, it compresses the support material. The elasticity of the steel is what holds the pin firmly in place. The knurling on the pin further enhances this effect.

Construction grade steel is an excellent base material for reliable powder and gas tool.

Penetration depth depends on the strength steel quality and the thickness of the base material.

For each product, product data sheet gives the application field.

The principle steels suitable are :

(1)	E24	E28	E36	A60	(1) French designation
(2)	ST37	ST44	ST52	ST60	(2) German designation
(3)	S235	S275	S355	E335	(3) European standard NF EN 10027-1

Minimum ultimate tensile strength of steel base material (N/mm²)

350	400	500	550	600	700	f _{uk} (N/mm ²)
-----	-----	-----	-----	-----	-----	--------------------------------------

INTO CONCRETE BASE MATERIAL

As the pin penetrates into concrete, the pin displaces soft components such as cement, stone, and aggregates and heats up to as much as 900°C. This sinters the surface of the pin shank which becomes extremely rough.

A specific heat treatment increases SPIT pin resistance to shearing. Decarborating the steel increases the flexibility of the pin shank as the carbon atoms migrate to free air.

Three factors affect the suitability :

- Compressive strength of the concrete
- Age of the concrete
- Aggregate hardness, size, form and percentage

For information, the table below gives the correlation between characteristic values and average strength on cylindrical and cubic specimens in Mpa.

Classes	Characteristic strength f _{ck}		Average strength		
	cylinder 16 x 32 cm	Cube 15 x 15 x 15 cm	cylinder (f _{cm}) 16 x 32 cm	Cube 15 x 15 x 15 cm	Cube 20 x 20 x 20 cm
C 16/20	16	20	20	25	24
C 20/25	20	25	25	31	29
C 25/30	25	30	30	37	36
C 30/37	30	37	37	46	43
C 35/45	35	45	45	56	53
C 40/50	40	50	50	62	59
C 45/55	45	55	55	69	65
C 50/60	50	60	60	72	68

Prestressed concrete / concrete beam slab

Over 90 days curing time, some concrete beam slab could reach 80 Mpa.

INTO OTHER BASE MATERIAL

Solid brick

Hollow concrete block
R_c = 6.5 N/mm²

Engineer clay brick rendered
R_c = 14.5 N/mm²

Calcium silicate block
R_c = 16 N/mm²

Success rate in concrete

When the aggregate hardness is lower then fasteners will go into the aggregate, if it's hard, the fastener will deflect.

SOFT aggregate types

HARD aggregate types

Using in ceiling position or in floor direction :

In case of overhead fastening the density of aggregates is more important on the under part of the slab because of the aggregates migration during concrete pouring. This phenomenon involves that the rejection factor will be more important for firing in ceiling. The nail suitable for this kind of application is the HC6 range.

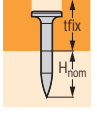

PIN LENGTH SELECTION

The choice of the pin length is linked to the embedment depth of the pin in the base material. The embedment depths depends on the compressive strength of the concrete, or the ultimate limit strength of the steel, and whatever the thickness of the base material.

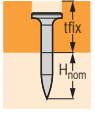

So, Total pin L = $H_{nom} + t_{fix}$

→ In concrete base material, the table below gives an information of the minimum embedment depth related to concrete compressive strength :

 $H_{nom} \text{ (mm)}$		$H_{nom} \text{ (mm)}^{(1)}$		
		C9 / SC9	C6	SC6 / HC6 / THC6
	C16/20	30 – 35	25 – 28	25 – 28
	C20/25	25 – 30	20 – 22	20 – 22
	C25/30	25 – 28	15 – 20	15 – 20
	C30/37	20 – 25	15 – 18	15 – 18
	C40/50	15 – 20		13 – 16
	C50/60	15 – 20		12 – 15

→ In steel base material, the table below gives an information of the minimum embedment depth related to the ultimate limit strength of the steel :

 $H_{nom} \text{ (mm)}$		$H_{nom} \text{ (mm)}^{(1)}$	
		SC9	SC6 / HC6
	$f_{uk} = 350 \text{ N/mm}^2$	12	6.5
	$f_{uk} = 500 \text{ N/mm}^2$	10	

f_{uk} : ultimate strength

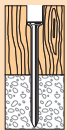

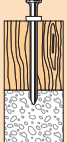

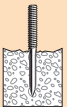

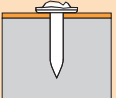

⁽¹⁾ All figures given are to be used as a guide and a job site suitability tests is always recommended.

Trouble shooting

FIXINGS TO STEEL

Pin is not deep enough in the steel		Too less power Base material too hard	Use stronger cartridge if possible More power Use high performance pins
Pin does not stick to the steel		Base material not thick enough (> 5 mm)	Decrease power adjustment or cartridge Check pin selection
Pin breaks		Too much power Base material too hard Pin too long	Use weaker cartridge or decrease power setting Use shorter pin Check tool piston wear
Pin head damages the material to be fixed		Too much power	Use weaker cartridge Less power
Hurt pin head		Too much power Damage piston	Decrease tool power setting Use weaker cartridge Change piston

FIXINGS TO CONCRETE

Pin too deep		Pin too short Too much power Depth adjustment incorrect (GAS)	Use longer pin Less power (PAT) Use weaker cartridge (PAT) Decrease depth adjustment (GAS)
Pin not deep enough		Pin too long Too less power Depth adjustment incorrect (GAS)	Use shorter pin More power (PAT) Use stronger cartridge (PAT) Increase depth adjustment (GAS)
Pin is bent		Hard and/or big supplementaries in the concrete Rebar directly under the surface Hard surface (steel)	Use shorter pin Drilling before setting Use stronger cartridge Check perpendicularity shooting
Concrete flakes off		Prestressed concrete Hard and/or big supplementaries in the concrete Old concrete	Use shorter pin Drilling before setting
Hurt pin head		Too much power Damaged piston	Less power Use weaker cartridge Change piston

Type of actions

TENSILE loading is applied along the axis of the fastener.

SHEAR loading is applied perpendicular to the axis of the fastener.

TYPE OF LOADS

Static or quasi-static loads

The static or quasi-static loads are dead loads of the element fixed, permanent and variable actions as wind, snow ...

Dynamic loads

The dynamic loads are variable actions in time with a medium or high amplitude. For example, motor vibration, regular shock ...

Some dynamic loads could be considered as quasi-static loads (wind ...).

Resistance

THE RESISTANCE DEPENDS ON MANY FOLLOWING CONDITIONS

Base material :

The same fastener will behave differently if fixed into concrete than if fixed into steel.

Base material properties :

- For concrete,
 - concrete strength
 - aggregate size and hardness
- For steel,
 - Steel tensile strength
 - Steel thickness

Part to be fixed :

Thin or weak items may be pulled over the fastener.

Firing through thick or strong parts may absorb driving energy.

Penetration depth :

As penetration depth increases, so does pullout resistance. The recommended penetration depth depends on the fastener shank length chosen.

Spacing and edge distance :

The recommended resistance can be achieved at the minimum dimensions for spacing (S_{min}), and edge distance given in the data sheet.

Resistance

CHARACTERISTIC RESISTANCE

The characteristic resistance is calculated from the average value of the mean failure load. It corresponds to the 5%-fractile of failure loads for the level of confidence (90%). The estimation depends on number of tests and the variation coefficient of tests.

NOTE

Pins with failed installation have not been taken into account for determination of the mean failure loads.

DESIGN, RECOMMENDED RESISTANCE AND SAFETY FACTORS

Out of the characteristic loads, the safety factors are then applied to give the design resistance (using partial safety factor) and recommended resistance (using global safety factor).

The global safety factor takes account of both the uncertainty of applied load and of resistance.

The global safety factor are slowly being replaced by partial safety factor which allow the two uncertainties to be treated separately.

S : Action

F_{rk} : characteristic resistance

γ_M : partial safety factor for resistance

F_{rd} : Design resistance

γ_F : partial safety factor for action

F_{rec} : recommended resistance

$\nu = \gamma_M \cdot \gamma_F$: global safety factor

Design resistance

$$F_{rd} = \frac{F_{rk}}{\gamma_M} S \cdot \gamma_F$$

Recommended resistance

$$F_{rec} = \frac{F_{rk}}{\nu} S$$

FIXING TO STEEL

Static tests are performed on all SPIT fasteners, and the mean ultimate resistance obtained are used to calculate the characteristic resistance.

So, typically, the following global safety factors are applied : $\nu \geq 2.5$.

For HSB14, and SBR14, the cycle test program is carried out on these fasteners, so the following global safety factors must be applied : $\nu \geq 2$.

FIXING TO CONCRETE

Hard aggregates, in concrete may result a failed installation. The proportion of failed installation to successful ones increase with concrete compressive strength and maximum aggregate size.

As a result, we recommend to use the individual resistance of one fastener to design the application, but with condition that at least 5 fixings are used to fix each part into concrete. So the following global safety factors must be applied : $\nu \geq 3$.

Edge and spacing distance recommendation

Distance recommendations with GAS technology

Steel

e = the minimum space between two fixings
b = the minimum distance from the edge

Concrete

B = the minimum distance from the edge

E = the minimum space between two fixings

Distance recommendations with POWDER technology

Steel

e = the minimum space between two fixings
b = the minimum distance from the edge

Concrete

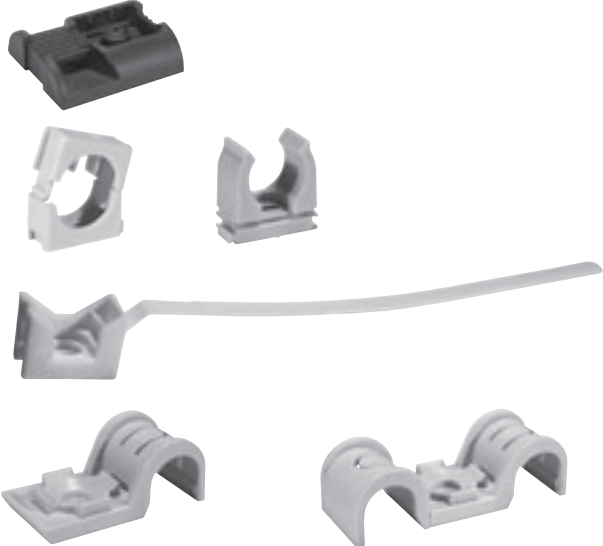

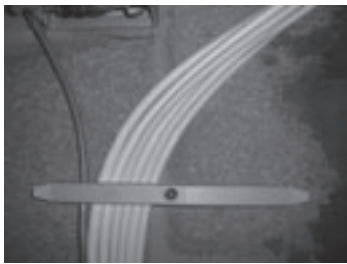

B = the minimum distance from the edge

E = the minimum space between two fixings

SPIT C6

C6-20

C6-25 ; C6-30 C6-35 ; C6-40

DESCRIPTION

- Using with wiring accessories, to fix drywall track.

PROPERTIES MATERIAL

Shank in carbon steel

- Total length Lt : 20, 25, 30, 35 or 40 mm
- Electrogalvanised, min zinc coating 5 µm
- Hardness (C6-20) : 53 to 56 HRc
- Hardness (C6-25/30/35/40) : 50 to 55 HRc

TOOLS

P700 E - P700 P

AGREEMENT

CSTB Technical approval 3/06 - 460

ACCESSORIES

Magnetic nozzle pieces for:

- Fixing Metal latch

code 333 700

- Metal P-CLIP

code 320 940

- Other accessories

- Wiring accessories for electrician & Plumber
- Pirelli FIREFIX for fire resistant cabling
- Threaded rod hanger : TRH CLIP

		NRk (kN)	VRk (kN)	NRec (kN)	VRec (kN)
 C20/25 to C60/70	H _{nom} = 15 mm	0.87	0.75	0.30	
	H _{nom} = 18 mm	1.19		0.40	
	H _{nom} = 20 mm	1.41		0.47	
 f _{uk} = 410 - 450 N/mm ²	H _{nom} = 6.5 mm	5.0	3.6	1.5	1.2
 f _{uk} = 500 - 550 N/mm ²					

APPLICATION LIMIT

Concrete: C50/60

Prestressed - Prefabricated concrete C60/70

Steel

Thickness of base material (mm)

(1) French designation - (2) German designation
(3) Designation according to European standard NF EN 10027-1

Ultimate tensile strength of base material (N/mm²)

SPIT THC6-M6

DESCRIPTION

- Threated pin, using in hard material

PROPERTIES MATERIAL

Shank in carbon steel

- Total length Lt : 21, 26 mm
- Thread M6
- Thread height : 6 mm
- Mechanical zinc plating, min zinc coating 10 μm
- Hardness 56 \geq HRc

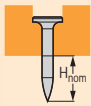

TOOLS

P700 E - P700 P

NAIL LENGTH SELECTION

THC6-M6 range	Length shank	500 pcs/box
THC6-M6-6/21	21	053213
THC6-M6-6/26	26	053214

RECOMMENDED LOAD

	H _{nom} = 18 mm	1.19		0.40	

Minimum 5 fixings per part fastened

APPLICATION LIMIT

Concrete: C50/60

Prestressed - Prefabricated concrete C60/70

SPIT CG6 - HCG6

DESCRIPTION

- Using for PVC-U trunking
- The patented energy absorber design eliminated damage to the trunking and prevents deformation.
- The head of the nail is designed to countersink into the washer stopping contact between the metal nail head and cabling.

PROPERTIES MATERIAL

Shank in carbon steel

- Total length Lt : 15, 20, 25, 30, 35 mm
- Electrogalvanised, min zinc coating 5 µm
- Hardness (HCG6-15/CG6-20) : 53 to 56 HRc
- Hardness (CG6-25/30/35) : 50 to 55 HRc

TOOLS

P700 E

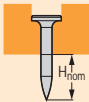

NAIL LENGTH SELECTION

CG6 range	Length (Lt)	White strip 500 pcs/box
HCG6-15	15	011210
CG6-20	20	046610
CG6-25	25	046620
CG6-30	30	011211
CG6-35	35	011212

* : leaves no plastic residue after fixing

RECOMMENDED LOAD

CG6 range		Characteristic resistance		Recommended load	
		NRk (kN)	VRk (kN)	NRec (kN)	VRec (kN)
 C20/25 to C30/37	H _{nom} ⁽¹⁾ = 15 mm	0.87	0.75	0.30	0.25
	H _{nom} ⁽¹⁾ = 18 mm	1.19		0.40	
	H _{nom} ⁽¹⁾ = 20 mm	1.41		0.47	

(1) Embedment depth
H_{nom} = 15-20 mm is recommended

L = H_{nom} + tfix (see p. 13)

SPIT CW6 - crocowood

DESCRIPTION

- Steel plates to wooden applications.
- Possibility to remove it, using Pozidrive print (PZ2).

PROPERTIES MATERIAL

Screw in carbon steel

- Countersunk head, PZ2
- Electrogalvanised, min zinc coating 5 μm
- Hardness : 500 N/mm² mini
- Without Chrome VI

TOOLS

P700 P

APPLICATION LIMIT

- Wooden structures, with minimum thickness 25 mm.
- No adapted for concrete base material.

RECOMMENDED LOAD

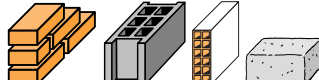

CW6 range	Tensile load		Shear load for a displacement of 1 mm
	N _{Rk} * (kN)	N _{Rec} * (kN)	V _{Rec} * (kN)
 Wooden plate, thickness 35 mm (pine wood)	0.46	0.15	0.10

* Indicative value

SPIT threaded rod hanger

PROPERTIES MATERIAL

- Steel E24, thickness 1.5 mm
- Coating, electroplating 7 to 15 μm
- TRH-CLIP element with threaded hole diameters for M6-M8 (code 011430)

TOOLS

P700 E

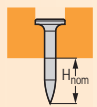

NAILS TYPE RECOMMENDED

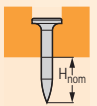

- HC6-15 in steel base material
- HC6-15, HC6-17, HC6-22 in concrete C50/60 and prestressed concrete
- C6-20, C6-25 in concrete C30/37 maximum

APPLICATION LIMITS

- Static application only
- Maximum rod length : 600 mm

RECOMMENDED LOAD

SC6-15 HC6-15			Characteristic resistance	Recommended load	TRH-CLIP displacement at the recommended load
			N _{Rk} (kN)	N _{Rec} (kN)	d(N _{Rec}) (mm)
	f _{uk} = 410 – 450 N/mm ²	H _{nom} = 6.5 mm	5.0	1.5	9.5
	f _{uk} = 500 – 550 N/mm ²				

HC6 range			Recommended load	TRH-CLIP displacement at the recommended load
			N _{Rec} (kN)	d(N _{Rec}) (mm)
	≥ C20/25	H _{nom} ≥ 15 mm	0.10	0.4
	Prefabricated Prestressed	H _{nom} = 10-12 mm	0.10	0.4

$N_{Rec} = N_{Rk} / 3$: the recommended load is calculated from the characteristic load and a global safety factor equal to 3.

Minimum 5 fixings per part fastened.

TRH-CLIP DEFORMATION

FIRE TEST

Test report. nb 05-158/A (CSTB)

TRH-Clip + HC6-17 pin	Characteristic resistance under fire exposure		
	$N_{Rk,fi}$ (kN) 30 mn	$N_{Rk,fi}$ (kN) 60 mn	$N_{Rk,fi}$ (kN) 90 mn
C20/25 $H_{nom} = 15 \text{ mm}$	0.25	0.13	0.02

$N_{Rd,fi}(t) = N_{Rk,fi} / \gamma_{M,fi}$, usually the safety factor under fire exposure $\gamma_{M,fi} = 1$.

PIRELLI FIREFIX using SPIT Pulsa nailing

CLIP conform fixing requirements of BS5839-1:2002 standard

DESCRIPTION

Pirelli has developed FP Firefix™ in partnership with ITW Construction Products. Pirelli has designed special cable clips and adaptators to fit PULSA 700E.

Pirelli clip is used to fix fire performance cables, holds one or two cables.

PROPERTIES MATERIAL

- Stainless steel
- Available in red or white LSOH powder coating

TOOLS

P700E

SIZE SUITABLE

		Code for Red coating clip	Code for White coating clip
FP200 Gold®	2 core x 1.5 mm ²	UFPNF02R	UFPNF02W

Cable diameter (mm)	Horizontal spacing (mm)	Vertical spacing (mm)
Not exceeding 15 mm	300	400

SPIT HSBR14

code 011391 (in tube) / code 011390 (in bulk) / code 053953 (in strip)

APPLICATION LIMIT

CONTROL FIXING

Thickness of base material	$H_{min}^{(1)}$ (mm)	$H_{max}^{(1)}$ (mm)
$h \geq 6$ mm	5	10.5

(1) Values obtained with 0.75 mm steel sheet.

DESCRIPTION

→ Cladding panels, roofing

PROPERTIES MATERIAL

The HSBR14 nails is composed of :

→ Shank in carbon steel

- Ultimate tensile strength : 2300 N/mm²
- Yield strength : 1600 N/mm²
- Mechanical zinc plating, min zinc coating 10 µm
- Hardness > 57 HRC

→ One steel washer

- Min zinc coating 8 µm
- Electro galvanizing
- The plate washer developed for a good clamping of the plates to avoid damages when shooting.

TOOLS

P560 – P230 – P525L

POWER SETTING

→ Base material :

Resistance of base material S235 (E24) and with a thickness higher than 6mm according to the field of application given in the first page.

ACCORDING TO EUROPEAN TECHNICAL APPROVAL ETA N° 08/0040

→ Sheetings and type of connections :

1 sheeting

2 sheetings

2 Sheetings

4 sheetings

Sheeting thickness (mm)	Characteristic loads [kN]		Design loads [kN]		Recommended loads [kN]		Connection type
	Shear	Tensile	Shear	Tensile	Shear	Tensile	
	V_{Rk}	N_{Rk}	V_{Rd}	N_{Rd}	V_{Rec}	N_{Rec}	
0.63	4,2	5,3	3,4	4,2	2,2	2,8	A B C D
0.75	5,8	6,6	4,6	5,3	3,1	3,5	A B C D

2.00	10,0	10,4	8,0	8,3	5,3	5,5	A
2.50	10,0	10,5	8,0	8,4	5,3	5,6	A

$V_{Rd} = V_{Rk} / \gamma_M$: the design load is calculated from the characteristic load and a partial safety factor $\gamma_M = 1.25$.

$N_{Rd} = \alpha_{cycl} \times N_{Rk} / \gamma_M$: the design load is calculated from the characteristic load and a partial safety factor $\gamma_M = 1.25$ and $\alpha_{cycl} = 1$.

For the calculation of the recommended load, we applied the partial safety factor $\gamma_F = 1.5$. The recommended loads N_{rec} and V_{rec} are appropriate for Eurocode 1 wind loading design with a partial safety factor $\gamma_F = 1.5$ for wind load and a partial resistance factor $\gamma_N = 1.25$ for fastening.

code 011391 (in tube) / code 011390 (in bulk) / code 053952 (in strip)

APPLICATION LIMIT

Ultimate tensile strength of base material (N/mm²)

CONTROL FIXING

$3 \leq h < 6$ mm ⁽²⁾	7	10.5
$h \geq 6$ mm	5	10.5

(1) Values obtained with 0.75 mm steel sheet.

(2) French rules AT CSTB.

DESCRIPTION

Cladding panels / roofing

PROPERTIES MATERIAL

The SBR14 nails is composed of :

Shank in carbon steel

- Ultimate tensile strength : 2300 N/mm²
- Yield strength : 1600 N/mm²
- Electrogalvanizing, min zinc coating 7 µm
- Hardness : 54 to 58 HRC

One steel washer

- Min zinc coating 8 µm
- Electrogalvanizing
- The plate washer developed for a good clamping of the plates to avoid damages when shooting.

Kesternitch test, 2 cycles exposure

TOOLS

P560 - P230 - P525L

POWER SETTING

ACCORDING FRENCH RULES (TECHNICAL APPROVAL ISSUE FROM CSTB, N° 5/07-1973) :

Thickness of base material S235 (E24) quality	Characteristic load ⁽¹⁾ (kN), for connection of one sheet with thickness 0,75 mm fuk > 400 N/mm² (S280GD) N_{Rk}
$3 \leq h < 6 \text{ mm}$	4,0
$h \geq 6 \text{ mm}$	6,0

⁽¹⁾ according to the standard NF P 84-206, ref. DTU 43.3

ACCORDING DIBT GERMAN APPROVAL N° Z-14.1-4 :

→ Base material :

Resistance of base material S235 (E24) and with a thickness higher than 6mm according to the field of application given in the first page.

→ Sheetings and type of connections :

1 sheeting

2 sheetings

2 Sheetings

4 sheetings

Sheeting thickness (mm)	Characteristic loads [kN]		Design loads [kN]		Recommended loads [kN]		Connection type
	Shear	Tensile	Shear	Tensile	Shear	Tensile	
	V_{Rk}	N_{Rk}	V_{Rd}	N_{Rd}	V_{Rec}	N_{Rec}	
0.63	3.4	2.4	2.5	1.8	1.7	1.2	A B C D
0.75	4.4	4.0	3.3	3.0	2.2	2.0	A B C D

2.50	9.4	9.4	7.1	7.1	4.7	4.7	A

V_{Rd} = V_{Rk} / γ_M : the design load is calculated from the characteristic load and a partial safety factor **γ_M = 1.33**.

N_{Rd} = α_{cycl} x N_{Rk} / γ_M : the design load is calculated from the characteristic load and a partial safety factor **γ_M = 1.33** and **α_{cycl} = 1**.

For the calculation of the recommended load, we applied the partial safety factor **γ_F = 1.5**.

Code 032650

APPLICATION LIMIT

(1) E24	E28	E36	A60
(2) ST37	ST44	ST52	ST60
(3) S235	S275	S355	E335

(1) French designation - (2) German designation
(3) Designation according to European standard NF EN 10027-1

Ultimate tensile strength of base material (N/mm²)

CONTROL FIXING

- $H_{\min} = 5 \text{ mm}$ and $H_{\max} = 7 \text{ mm}$ for guaranteeing the recommended working loads within the application limits.
- Maximum sheet thickness : 2 sheets with max thickness of 1 mm.

DESCRIPTION

Fix metal cladding sheets to steel framework.

PROPERTIES MATERIAL

The SBR9 nails is composed of :

Shank in carbon steel

- Ultimate tensile strength : 2000 N/mm²
- Yield strength : 1600 N/mm²
- Hardness : 54-58 HRc
- Electro galvanizing, Min zinc coating 7 μm

One steel washer

- Min zinc coating 8 μm
- The plate washer developed for a good clamping of the plates to avoid damages when firing.

TOOLS

P370

RECOMMENDED LOAD

The recommended load given below, are suitable for a resistance of base material higher than 400 N/mm² and with a minimum thickness of 5 mm.

Sheet thickness ⁽¹⁾ $F_{uk} > 390 \text{ N/mm}^2$ (S320GD)	Design resistance [kN]		Recommended load [kN]	
	Tensile	Shear	Tensile	Shear
	N_{Rd}	V_{Rd}	N_{Rec}	V_{Rec}
0.75 mm	2.5	2.2	1.7	1.4
1.00 mm	3.2	3.2	2.2	2.2
1.25 mm	4.0	4.7	2.6	3.1
1.50 mm	4.1	4.7	2.8	3.1
2.00 mm	4.3	4.7	2.9	3.1

$F_{rec} = F_{Rk} / 2.5$: the recommended load is calculated from the characteristic load and a global safety factor equal to 2.5.

Recommended load is calculated with a safety factor $\gamma_F = 1.5$.

⁽¹⁾ For a sheet thickness equal to 2 mm, it is possible to use 2 sheets of 1 mm.

SPIT SC9 - SC9 strip

SPIT CR9TP - CR9P

DENSITY FIXING

- 3 pins per m² for vertical installation.
- 5 pins per m² for ceiling installation.
- Maximum spacing between washer : 0.7 meter.

DESCRIPTION

- CR9P : Fastening of watertightness membranes
- CR9TP for PVC Washer (Ø80 mm) : using in tunnel for fastening of the geotextile for the waterdrainage. The layer is welded on the PVC washer.

PROPERTIES MATERIAL

- **Shank in carbon steel**
 - Hardness : 50 – 55 HRC
 - Electrogalvanizing, min zinc coating 7 µm
- **CR9P**
 - Plastic washer : Ø 35 mm
- **CR9TP**
 - Flat metallic washer
 - Ø 21.75 mm
 - Electrogalvanizing, min zinc coating 3 µm
 - Plastic tip for pin centering
- **PVC washer** for CR9T / CR9TP :
Ø 80 mm, thickness 10 mm

TOOLS

P60 – P370

CR9TP only for P45

PVC : 498130

DENSITY FIXING

- 3 pins per m² for vertical installation.
- 5 pins per m² for ceiling installation.
- Maximum spacing between washer : 0.7 meter.

CONVENIENCE TEST FOR EACH JOBSITE

Pull out of the fastened from the support

A convenience proof will be carried out for each support type.

To impede the nail to pull up from the support in case of stress on the fastener, a tensile strength exercised by a dynamometer is defined at a tensile speed of 1 to 2 mm per minute:

Out of 10 traction tests, the average of the pulling up values must be superior to 1 kN after suppression of a maximum of 2 values lower than 0.75 kN.

These tests are carried out by incorporating between the support and the tensile sleeve a 600 g geotextile to simulate the pulling,

In young concrete (less than 2 days), the number of fasteners will be doubled.

DESCRIPTION

→ Using in tunnel for fastening of the geotextile for the waterdrainage.

→ The membrane is welded on the PVC washer.

The using of CR9T is recommended by AFTES (Association Française Tunnels et Equipements Souterrains)

PROPERTIES MATERIAL

→ Shank in carbon steel

- Hardness : 50 – 55 HRC
- Electro galvanizing, min zinc coating 7 µm

→ Curved washer

- Ø 21.75 mm
- Electro galvanizing, min zinc coating 3 µm

→ PVC washer for CR9T :

Ø 80 mm, thickness 10.5 mm. The following tests were performed and accepted by AFTES.

- Washer / Nail tear strength tests
- Membrane / washer peeling strength tests

NAIL LENGTH SELECTION

Designation	Code
CR9-30 T	032350
CR9-35 T	032240
CR9-40 T	032230

Dimensions of the PVC washers

To guarantee a sufficient welding surface and a good membrane/washer weldability PVC washers must have the minimum following size:

- minimum diameter: 80 mm
- minimum thickness at the centre (nail head): 8 mm

Out of 10 nailing tests of the washer on concrete, no protruding of the nail head must be observed.

SPIT C9 formwork spacer

DESCRIPTION

- Form work spacer block for pillar, round post, round elements, cardboard formwork...

SPIT SA12-8 / grating system

APPLICATION

Fixing of grating

Suitable for grids of 20 to 55 mm in height and base steel at least 6 mm thick, with a mesh dimension higher than 18x18 mm to allow the clearance of the setting tool.

PROPERTIES MATERIAL

Pin

- Fine carbon steel.
- Core hardness : 54 - 58 HRc.
- Electrogalvanizing min. zinc coating 7 µm.

Spacer washer

- Sleeve steel, coated with 15 to 20 µm zinc plating.
- Ring in thermoplastic (anti-UV).
- Washer in steel with high yield limit coated with 15 to 20 µm zinc plating.

TOOLS

P250 recommended.

P200 - P370 (with specific adaptor) for low grade steel.

Belgium agreement 085 / Holland agreement 085	
Indirect action class A1 (A*), velocity < 100 m/s	
Complete contact pressure necessary to generate the shot	
Window for checking cartridge presence	
Noise level at operator, EN 12549 : LWA,1s = 113 dB(A) / LpA,1s,1m = 100 dB(A) / LpA,1s,0 = 104 dB(A)	
Vibration, EN ISO 8662-11 : 9.5 m·s ⁻²	
Consumables	
CR9T with 21.75 washer for PVC	
CR9TP	

SPIT P60

Tool specifications

Name	SPIT P 60
Impact force (Joules)	280
Weight (kg)	2.2
Overall dimensions LxHxH (mm)	310/62.5/180
Ammunition caliber	6.3/10 (10 loads in disc)
Disc loads colors	Brown, Yellow
Fastener lengths (mm)	15 to 60

Characteristics

Automatic cartridge advance
Semi-automatic compact tool
Power adjustment 8 positions
Reliable, light
Easy maintenance

Safety specifications

C.I.P agreement 001002
Indirect action class A1 (A*), velocity < 100 m/s
Complete contact pressure necessary to generate the shot
Window for checking cartridge presence
Noise level at operator, EN 12549 : LWA,1s = 113 dB(A) / LpA,1s,1m = 100 dB(A) / LpA,1s,0 = 104 dB(A)
Vibration, EN ISO 8662-11 : 7.9 m·s ⁻²

Consumables

C9, CR9, CR9P, SC9, CT30, CR9TP
C9 clip A, Posibanche, Formwork spacer, metal P-CLIP

SPITFIRE P370

Tool specifications		
Name	Spitfire P 370	Spitfire P 370 C60
Impact force (Joules)	340	340
Weight (kg)	2.8	3.2
Overall dimensions LxIxH (mm)	435/69/208	450/69/240
Ammunition caliber	6.3/10 (10 loads in disc)	6.3/10 (10 loads in disc)
Disc loads colors	Brown, Green, Yellow, Red	Brown, Green, Yellow, Red
Nail capacity (nbr)	1 in pin guide	10 in magazine (1 strip)
Fastener, lengths mm	15 to 70 (80 and 90 if predriven)	15 to 60 in strip
Characteristics		
Automatic piston return by rubber spring		
Universal fully automatic tool (1 nail per second with magazine)		
Power adjustment by wheel with indicator		
Different nose adapters for different application		
Safety specifications		
C.I.P agreement 001137 / BSI Kitemark agreement KM05325		
Belgium agreement 104 / Holland agreement 100		
Indirect action class A1 (A*), velocity < 100 m/s		
Complete contact pressure necessary to generate the shot		
Shock energy absorber for comfort		
Easy and quick maintenance		
Window for checking cartridge presence		
Noise level at operator, EN 12549 : LWA,1s = 114 dB(A) / LpA,1s,1m = 101 dB(A) / LpA,1s,0 = 105 dB(A)		
Vibration, EN ISO 8662-11 : 6.6 m·s ⁻²		
Accessories	Consumables	
Single shot	C9, CR9, CR9P, SC9, SBR9, SA9, CT30, C9 clip A, Posibanches, Formwork spacer, staff, metal P-CLIP, CR9TP	
Magazine	C9, SC9 (15 to 60 mm in strip), metal P-CLIP	
Kit CI 40 to 120	CI-6 & CI-9	
Kit SA12-8	SA12-8 + RE 25 to 40	

SPIT P250

Tool specifications	
Name	SPIT P 250
Impact force (Joules)	520
Weight (kg)	3.7
Overall dimensions LxH (mm)	360/70/200
Ammunition caliber	6.3/16 (10 loads in disc)
Disc loads colors	Green, Yellow, Blue, Red, Black
Fastener lengths (mm)	25 to 30

Characteristics	
Automatic cartridge advance	
Semi-automatic tool	
No mechanical power adjustment	
Easy maintenance	
Only used for grid floor fixing system	

Safety specifications	
C.I.P agreement 001102	
Belgium agreement 095 / Holland agreement 096	
Indirect action class A1 (A*), velocity < 100 m/s	
Complete contact pressure necessary to generate the shot	
Window for checking cartridge presence	
Noise level at operator, EN 12549 : LWA,1s = 114 dB(A) / LpA,1s,1m = 101 dB(A) / LpA,1s,0 = 105 dB(A)	
Vibration, EN ISO 8662-11 : 7.0 m·s ⁻²	

Accessories	Consumables
Standard	SA12-8 for RE 25 to 50

SPITFIRE P560

Tool specifications	
Name	SPITFIRE P 560
Impact force (Joules)	520
Weight (kg)	4.23 (3.7 as single shot version)
Overall dimensions LxH (mm)	363/277/77 (363/215/77 as single shot version)
Ammunition caliber	6.3/16 (10 loads in disc)
Disc loads colors	Green, yellow, blue, red, black
Fastener lengths (mm)	26 in strip (single shot also available)

Characteristics
Specialised tool for cladding, roofing & decking
Automatic cartridge advance
No mechanical power adjustment
Quick un-lock system
Easy maintenance
Different nose adapters
Stability STAB system

Safety specifications
C.I.P agreement 001144
Indirect action class A1 (A*), velocity < 100 m/s
Complete tool pressure necessary to generate the shot
Window for check disc presence
Noise level at operator, EN 12549 : LWA,1s = 117 dB(A) / LpA,1s,1m = 104 dB(A) / LpA,1s,0 = 107 dB(A)
Vibration, EN ISO 8662-11 : 7.6 m.s ⁻²

Accessories	Consumables
Magazine	SBR14 strip, HSB14 strip
Single shot pin guide	SBR14, HSB14

SPIT P230

Tool specifications	
Name	SPIT P 230
Impact force (Joules)	530
Weight (kg)	3.6
Overall dimensions LxH (mm)	354/70/200
Ammunition caliber	6.3/16 (10 loads in disc)
Disc loads colors	Green, Yellow, Blue, Red, Black
Fastener lengths (mm)	26

Characteristics	
Automatic cartridge advance	
Semi-automatic tool	
No mechanical power adjustment	
Reliability	
Easy maintenance	
Specialised tool for cladding, roofing & decking	
M.A.C. SYSTEM	

Safety specifications	
C.I.P agreement 001035	
Belgium agreement 073 / Holland agreement 065	
Indirect action class A1 (A*), velocity < 100 m/s	
Complete tool pressure necessary to generate the shot	
Window for check disc presence	
M.A.C. SYSTEM	
Noise level at operator, EN 12549 : LWA,1s = 116 dB(A) / LpA,1s,1m = 103 dB(A) / LpA,1s,0 = 107 dB(A)	
Vibration, EN ISO 8662-11 : 9.1 m-s ⁻²	

Accessories	Consumables
Standard	SBR14, HSBR14
Special Pin guide for 3 mm steel	SBR14, HSBR14

SPITFIRE P525L

Tool specifications	
Name	SPITFIRE P 525L
Impact force (Joules)	560
Weight (kg)	10.5
Overall dimensions LxH (mm)	1000/130/230
Ammunition caliber	6.3/16 (10 loads in disc)
Disc loads colors	Green, Yellow, Blue, Red, Black
Fastener lengths (mm)	26

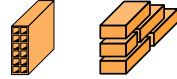

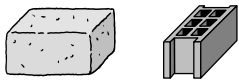

Characteristics
Automatic cartridge advance
Fully automatic tool (1000 pins per hour)
34 pins magazine in tube
No mechanical power adjustment
Easy maintenance
Only use for decking & roofing

Safety specifications
C.I.P agreement 001139 / BSI Kitemark agreement KM05325
Indirect action class A1 (A*), velocity < 100 m/s
Complete contact pressure necessary to generate the shot
Window for checking cartridge presence
M.A.C. SYSTEM
Noise level at operator, EN 12549 : LWA,1s = 117 dB(A) / LpA,1s,1m = 104 dB(A) / LpA,1s,0 = 104 dB(A)
Vibration, EN ISO 8662-11 : 3.3 m-s ⁻²

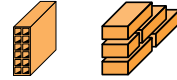

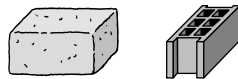

Accessories	Consumables
Standard	SBR14, HSBR14
Special pin guide for 3 mm steel	SBR14

Site safety with GAS Tools

- Read safety manual and operators manual before use.
- Wear hearing protection equipment.
- Wear safety glasses.

- Only use the device for its intended use.
- Only use the device on material to be nailed down.
- This is not a toy. Never point it at people.
- Always assume that the tool is loaded.
- Never transport the tool with your finger on the trigger.
- Never insert the pin guide with the back of your hand.

- When servicing, remove the gas cartridge, battery and nails from the magazine.
- Warning: the contents of the gas cartridge are flammable.
- The gas cartridge is under pressure. Protect it from temperatures above 50°C (sunlight).
- Do not open, puncture or burn the cartridge.

- Keep the cartridge away from flames, sparks and heat. Do not spray near flames or incandescent objects.
- The gas cartridge cannot be recharged. Do not attempt to fill or recycle it.
- Place empty cartridges in the bio-bag and send to SPIT After-Sales Service.
- Keep tool, gas cartridges and battery away from children.

- Only use the tool in well-ventilated areas. Store the gas cartridges in a well-ventilated place.
- Do not use the PULSA 700 in rainy or excessively humid conditions.
- Only use PULSA specified consumables or compatibles. In accordance with EN 792-13, PULSA has specified, in its operating instructions, PULSA consumables as safe to use. In case of use non-specified consumables, ensure that they are compatible, safe and lawfully on sale in european Union.

- For the maintenance of SPIT fastener driving tools, only spare parts specified by the manufacturer or his authorized representative shall be used (Item 7.2.1e).

Site safety with PAT Tools

- Read operator manual before use.
- Only qualified persons over 18 years of age can be permitted to use a PAT Tool. These persons must know perfectly how the tool works and must follow exactly the manufacturer's instructions and the safety regulations. They must be capable of maintaining the tool.

- The PAT Tool must be checked before use, so as to ensure that the safety devices are working properly and that the front end and the munition carrier are clean. Also ensure that the moving part generally slides well.
- The tool must be loaded just before use. If the tool is not in use, it must be unloaded and put back into its original packing. It must not under any circumstances be transported loaded.

- When firing, the operator must be in a stable position. The tool must be held at right angles to the base material.
- When a firing incident occurs, the tool must be unloaded immediately, taking all necessary precautions. If several incidents occur, inform the manufacturer.

- The PAT Tool and its charges must only be transported in their original packing.
- Never point the end of the nose pieces at anyone. The driver must always be pointed downwards.
- Never operate the driver with the flat of the hand.
- **The user must check the condition of the tool, even if it is not used, at least once a year.**
- It is prohibited for unauthorized persons to use a pat tool.
- It is prohibited to make any modification to the tool other than those specified in this manual.
- It is prohibited to operate the tool on profiled sheet or a metal structure before having ensured that there is no-one behind it.
- Fixing must not be attempted at a point where the profiled sheet support iron has been damaged or is defective. Fixing must be done at least 2 cm away from this area.
- It is prohibited to attempt fixing on materials which are not rigid or strong enough: hollow brick, plasterboard, slate, etc.
- It is prohibited to drive studs into brittle, hard materials, like cast iron, hardened steel, marble or granite.
- It is prohibited to do any fixing on concrete less than 10 cm from the edges.
- It is prohibited to use a stud driver in workshops or other premises where there are explosion risks.
- When using the tool, the user and bystanders must wear suitable safety glasses, a hard hat and hearing protection.
- The operator must be applied the National regulation.
- Safety data sheet on cartridges are available on request.
