

Metal press system – Fittings and parts for solder and screw joints with copper pipes

Technical information sheet

For other application or operating conditions please contact Viega for more information.

Manufacturing standard:

We hereby confirm the following: the fittings and parts for solder and screw joints with copper pipes provided by Viega are manufactured in accordance with DIN EN 1254-1 Fittings with ends for ends for capillary soldering or capillary brazing to copper tubes and 4 Fittings combining other end connections with capillary or compression end.

This standard regulates the materials, connection dimensions, tolerances on the tested fittings whether galvanized or not, as well as the maximum permitted pressures and temperatures. In addition part 1 of the standard stipulates the tolerances of the fittings for the combination with copper pipes in acc. with EN 1057.
